

Recommendations List

Front-end

We believe we can contribute to the front-end design of the current Learning Paths website. All of us did a lot of work in HTML, CSS, and Javascript over the summer, so we all feel comfortable doing the front-end. We also see the appearance of the website right now, and think that it can be improved greatly. We noticed that there is a lot of PHP in Austin's code, which we have not learned yet, but we are willing to spend some time learning it so we can modify the existing PHP code.

Back-end

Although none of us have much experience in the back-end, we have some interest in learning about the database. We want to help in collecting data and using it on the website. We want to contribute to the organization of data. Yet because we do not have the experience, we would need to take some time to get accustomed to the database environment.

Non-Facebook Login/Authentication

We believe the Learning Paths website needs a broader authentication than just the existing Facebook login. We think a simpler login of email and password would allow a greater audience to experience the Learning Paths, especially those that do not have a Facebook. We can also look into using Single Sign-On features of other sites, such as Instagram, Twitter, and Google Drive.
